

**Disrupting
the
Internet**

Why?

- Decentralization is good.
- Technology convergence.
 - Processing power.
 - Storage speed.
 - Bandwidth.
- Because you can.

What

- Alternative search engines.
- Alternative social networks.
- Alternative user services.
 - Secure email.
 - Single sign-on.
 - Advertising exchange networks.

How

- A Ryzen 9 server in your closet can:
 - Index 50M+ pages
 - Run a social network for 1000+ members.
 - Run a secure email service for 1000+ accounts.
 - Run an ad exchange network

How

- The software to run all these services is
 - Available
 - Free
 - Open source
 - Well tested.
- You have to learn some new technologies.

What if ...

- Their AI is useless without your data.
- Their tech cannot compete with your collective human intelligence.
- After you leave, they will beg you to come back.
